

Store Manager Retail Insight Report

Executive Snapshot

- Period analysed: 2026-08-01 to 2026-08-31.
- Revenue: Rs. 4,004,642; units sold: 5,041; invoices: 2,249.
- Average bill value: Rs. 1,781.
- Highest revenue calendar date: 2026-08-15 with Rs. 204,359.

Question 1: Product Performance

Top 3 products by units sold:

Product Name	Units	Revenue	Revenue Share Pct
Basic Crew T-Shirt	576	227,829	6
Cotton Kurti	357	356,643	9
Graphic Tee	318	157,235	4

Bottom 3 products by units sold:

- Scarf: 11 units, Rs. 5,040 revenue; possible reason: no SKU-level stockout evidence, so slow movement looks demand-led.
- Cap: 22 units, Rs. 6,578 revenue; possible reason: no SKU-level stockout evidence, so slow movement looks demand-led.
- Anarkali Kurta Set: 25 units, Rs. 36,160 revenue; possible reason: no SKU-level stockout evidence, so slow movement looks demand-led.

Question 2: Size and Inventory

- Assignment size demand is calculated only for alpha apparel sizes: XS, S, M, L, and XL.
- Size M shows the strongest alpha apparel stock pressure: 924 units sold and 31 SKU-level stockout days.
- Size XS is the slowest alpha apparel size: 146 units sold and about 40.1 days of cover at the end of the period.
- Order more depth for size M in proven fast products, and order less new depth for size XS until movement improves.
- Other size systems such as footwear/kids/OneSize are excluded from the assignment size chart to avoid mixing size systems.

Question 3: Trading Days

- Strongest weekday: Saturday with Rs. 178,132 average revenue per trading day.
- Slowest weekday: Tuesday with Rs. 86,588 average revenue per trading day.

- A small slow-day offer is worth testing, but the result should be measured against later same-weekday trading because this data does not prove promotion causality.

Question 4: Customer Patterns

- Young Adult Female customers bought more Tops in this simulated month: 458 units, Rs. 263,906 revenue.

- Young Adult Male customers bought more Tops in this simulated month: 430 units, Rs. 242,354 revenue.

- These are simulated assignment patterns and should not be generalized to real Pune shoppers.

Question 5: Exactly 3 Actions for Next Week

1. Reorder the strongest alpha apparel size pressure point first: size M has 31 SKU-level stockout days and 924 sold units.

2. Give front-of-store space to Basic Crew T-Shirt and reduce new buying for Scarf until its sell-through improves.

3. Test a small Tuesday offer on slow-moving stock, then compare that day against the next two Tuesdays before scaling it.

AI Manager Explanation

This explanation was generated from deterministic Python-calculated facts. The LLM layer is optional; all business numbers in this report come from the CSV files.

Limitations

- Stockout evidence is counted at SKU level and does not mean a whole size was unavailable.

- Slow products may reflect demand, display, price, or stock depth; this report gives evidence-backed possibilities, not certainty.

- Gross margin is estimated from item cost data where available and is not net profit.

- The dataset is assignment data, so customer patterns are useful for practice decisions but not demographic truth.
